

AXIS MobiCare

Managing your Fleet of Mobile Phones

Mobile Phones have brought about big changes in how business is conducted in today's modern world. As they become even more powerful, managing revisions of software, anti-virus definitions, security updates and web content will add additional drain on resources. Field based Sales Teams or Field based Engineering Teams are more effective out on the road, bringing them back into the office to reconfigure or update their devices is non-productive and ineffective; why not let Axis First remotely manage your fleet of mobile devices for you.

What is AXIS MobiCare?

AXIS MobiCare offers companies who use mobile technology to communicate with clients, suppliers and colleagues a configuration, management and support service across their entire fleet of devices.

Whether your company operates 5, 50 or 500 mobile devices, AXIS MobiCare cover ensures your different teams of people are operating the same revision of software with the same anti-virus definitions and security patches.

Our team of highly skilled technical engineers can remotely reconfigure devices when employees leave or change roles within your organisation.

What is included with AXIS MobiCare?

Configuration

When a new member of staff arrives at your company we can configure their mobile device whether it is a new device or reconfiguring an existing one.

When a member of staff changes role within the company and requires different software tools or a different device we can manage the transfer of contacts, emails, diary entries and documents.

Updates

Anti Virus definitions and security patches can be remotely deployed to a team or the entire fleet of mobile devices.

New software applications can be installed remotely and delivered direct to the correct users.

Remote Wipe or Disablement

If a device is lost or stolen, we can disable or even remotely wipe the contents within minutes ensuring sensitive data is not compromised and does not fall into the wrong hands.

Why do I need AXIS MobiCare?

The configuration of mobile devices for one team of people within your organisation may be different to that of another. Moving phones around an organisation can create a large workload. AXIS MobiCare can eliminate this overhead from your organisation.

Whilst salesmen, engineers and delivery teams may need common applications such as Satellite Navigation equally they may all need different tools or different devices. Updating versions of software for these different teams could prove time consuming. AXIS MobiCare can be used to manage the updates for your company.

Even if you only have 1 or 2 mobile devices you may still have a requirement to change your email settings, experience issues with synchronisation, leave the device on a train or in a taxi. AXIS MobiCare will cover you for support on devices or disabling devices if lost or stolen.

What other benefits are there?

As the number of mobile devices increases within organisations, management is becoming more difficult due to the diversity of software applications and types of devices entering the market. AXIS MobiCare can be used to totally manage your SmartPhones or Pocket PCs.

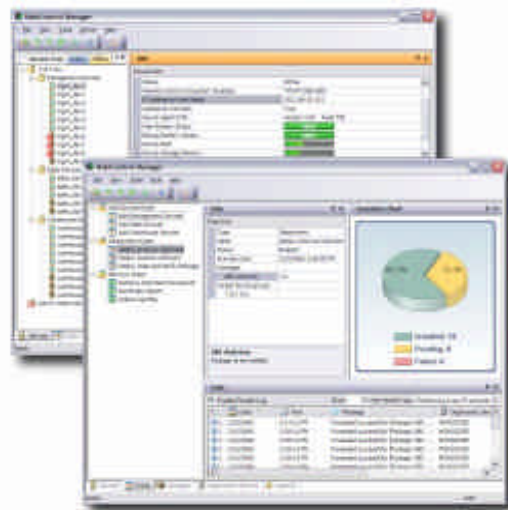

Being a small company with our own fleet of mobile devices, we understand the challenges, concerns and costs associated with mobile devices. AXIS MobiCare removes the administrative headache away from your business allowing you to focus on your business whilst we focus on ours.

How much does it cost?

This depends on how many and what type of devices you have. Initially we need to install a small piece of software on each device. This inexpensive product does require annual renewal. Once this is set up each we charge a small monthly management fee for each device on your contract.

How does it work?

Once we have installed the management software on the device, which can be arranged remotely, we can then see the device on our highly advanced device management console. From here we can see vast amounts of information about each device, from what the battery status is to which version of an application is installed. We can even look at individual registry setting and compare one device to another to see what may be an issue.
