

Vodafone 3G USB Modem

Certified
Partner

Practical, Reliable & Quick

Mobile communications are changing and shaping the way modern business is conducted. Having the ability to connect at near broadband speeds whilst out of the office to receive emails enables people to respond to customer enquiries, deal with incidents and make informed decisions which in turn increase productivity and improve customer service. Now it is possible to review and revise documents, update your calendar and maintain your contacts and browse the Internet using a truly mobile 3G USB device.

What is the Vodafone 3G USB Modem?

The Vodafone 3G USB Modem is a device which enables you to connect to the Internet, Office Network or Virtual Private Network without the need for a telephone line.

What are the benefits of the Vodafone 3G USB Modem?

The Vodafone 3G USB Modem is the first data device that operates using 'plug & play' technology. This means that you can simply plug the modem into the USB port on your PC or Laptop and the drivers will install automatically.

What other benefits are there?

Because this is a 3G Mobile Data device, you do not need to connect the modem to a telephone line, eliminating the need for different country converter kits when traveling abroad.

Another benefit is the speed of connection, in 3G enabled areas, you will experience near broadband speed browsing and email retrieval.

For people with an Apple Mac or MacBook, the conventional PCMCIA Data Cards were not accessible as most did not have this connectivity. Because the Vodafone 3G Modem uses USB this solution is compatible and only requires the drivers to be loaded and you are ready to go.

Does the modem support HSDPA?

Yes, the Vodafone 3G USB Modem is HSDPA enabled, which means that in areas that offer High Speed Downlink Packet Access (HSDPA) you will experience significantly faster data transfer speeds.

Where coverage does not support HSDPA or 3G, the modem will revert to General Packet Radio Service (GPRS) which is supported in over 100 countries worldwide.

What can I use the Vodafone 3G USB Modem for?

Essentially the 3G modem is exactly the same as a traditional modem, just without the telephone line. Therefore you can use it to browse the Internet, send and receive email, connect to your office network, or if you have the necessary software send and receive faxes.

In addition to the modem, what else do I require?

In order to use the Vodafone 3G USB Modem you require a Data-Enabled Sim Card. This can be a voice and data enabled Sim Card which you switch between a mobile phone and your modem or can be a separate dedicated Sim Card.

Either way, you will require a data contract or have data added to an existing voice contract.

Can Axis First organise everything for me?

Yes, Axis First can supply the Sim Card and 3G USB Modem as well as set up the contract with the Airtime Provider.

We can also organise training on how to use the modem effectively ensuring a smooth transition for you.

What services does Axis First offer?

As independent advisors, we work with the major UK airtime providers enabling us to recommend the most appropriate devices, tariffs and advice for your business.

In order to determine the most cost-effective call plans for your business involves analysing your current bills from your fixed line and mobile providers. At Axis First we have software tools that perform this analysis and produce a usage profile. We offer this as a free consultation exercise for new and existing customers.
