

# AXIS Learning Experience

## Training Solutions for your IT Users

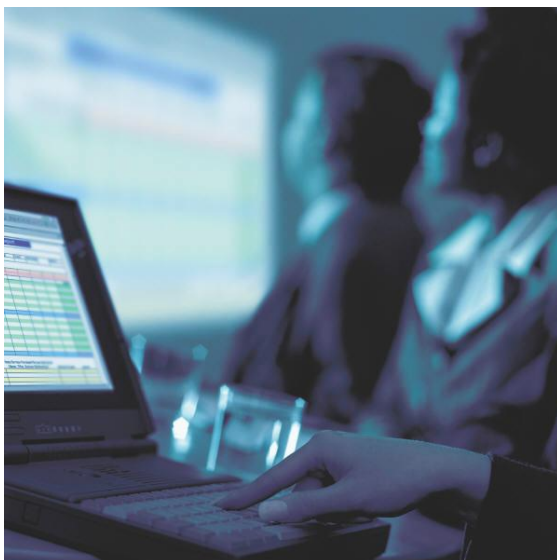

*Your IT and your employees are probably the two most valuable assets to your business; Studies show people who are highly trained are both happy and loyal. Most users of software will admit they only use around 10-20% of the product's capabilities to perform what they need for a specific job. By unlocking more of the potential of your employees and your software you can achieve noticeable improvements in efficiency and productivity.*

### What is AXIS Learning Experience?

By delivering “learning through experience”, we offer comprehensive software training for business people, designed to maximise return on your IT investment and improve the efficiency and productivity of your IT users.

### What products are available under the AXIS Learning Experience?

For a current list of deliverable courses please visit our education web site at [www.axisfirst.co.uk/technology/education](http://www.axisfirst.co.uk/technology/education).

### Who is delivering the AXIS Learning Experience?

Our trainers are highly respected product specialists with real-world life experience in using their chosen software applications in their own and their customer's businesses.

The valuable experience that our trainers bring to the training room enables them to understand some of the issues faced by different industries or sectors, and apply their knowledge and skills appropriately to educate beyond the textbook.

### When you say Learning Experience, what do you mean?

By Learning Experience we mean providing your IT users with practical usable learning methods and materials to enable them to gain knowledge and experience.

This flexible “how to” approach to training demonstrates best practice, tips and tricks and valuable real-life examples that demonstrates all the functionality of the software and helps deliver skills to gain competitive advantages over your competitors.

## How is the AXIS Learning Experience Delivered?

As a small business ourselves, we understand the implications and impact removing people from the office can have on the company. Therefore, we offer a selection of delivery methods.

Our most popular choice is our instructor led courses, whereby delegates have the use of their own dedicated equipment. The training room contains audio visual tools relative to the subject matter.

Alternatively, we can deliver the course at your offices in your own environment whereby your employees do not have to leave the premises. This is popular for small businesses where limited resources are available to provide cover for someone away from the office.

Finally we offer a range of Microsoft e-Learning products which are self-paced study materials designed to fit in with busy working environments.

## Is Onsite Training available?

Onsite training can be delivered at your workplace and the content can be tailored to your particular organisation or industry.

To ensure maximum benefit from our trainer, we would recommend a distraction free environment with dedicated equipment, audio visual aids and flipchart/whiteboard.

## Who is AXIS Learning Experience for?

The Learning Experience is aimed at business people who wish to receive more value by unlocking more of the potential or functionality from the software they use.

These people often need to understand the “how” operations of the applications needed in their jobs as well as being shown the “are you aware of” technologies and features within their existing applications.

## How do I book a course?

Speak to a member of the Axis First Sales Team on 01278 421020.

## Is there a limit to the number of delegates on a course?

In order to deliver maximum value from the Learning Experience we restrict class sizes to no more than 10 delegates for this type of content in some cases the maximum size may be reduced to 6.

This small class size ensures individual attention, relative content without too many tangents and delivery at a pace that everyone is comfortable with.

A class size of 10 has shown to be manageable and can provide good networking opportunities to share experiences and knowledge with other delegates.
